

WHAT IS CLAIMED IS:

1. A tongue depressor which has a lighting function, comprising:

5 a hole bored in a longitudinal direction of a main body.

2. The tongue depressor according to claim 1, wherein the hole bored in the main body is closed on a front part of the main body to make the main body light-  
10 transmissive.

3. A tongue depressor comprising:

a hole bored in a longitudinal direction of a main body which uses a light-transmissive material,

15 wherein a light fixture can be inserted into/pulled out from the main body.
